

Radioactive II Hazchem Sign

Product Images

Short Description

Radioactive II Hazchem Sign

Description

- Indicates the storage or containment of Class 7 Radioactive II substances within a facility, vehicle or container etc.
- Class 7 Radioactive II substances are those containing relatively low radiation levels (>0.5 - 50 mrem/hr max on the surface).
- Read Chapter 2.7 of the Australian Dangerous Goods Code for information on classification limits only (latest edition - 7.6) – [available here](#).
- Note that the transportation of Class 7 Radioactive Materials is not subject to the ADG Code.
- Recognisable by a white and yellow split background with black wording, black radioactive symbol and the red 'II'.
- Provides space for and requires manual recording of 'Contents', 'Activity' and Transport Index'
- Sign complies with ADG, WHS Regulations and Australian Standard AS1216-2006.
- Available in a large range of materials and sizes to suit any application.
- Hazchem signs are required at any workplace that stores or transport hazardous chemicals over a certain quantity.
- During an emergency situation, this sign will allow emergency services to identify any radioactive substances present.
- It is important as a business to correctly label all hazardous chemicals using the appropriate Hazchem Signage.

All Bronson Safety Hazchem signage meets the requirements of Australian Government Legislation.

- For more information on Class 7 Radioactive II substances, [click here](#).
- For information on Hazchem labelling and signs in a workplace, read WorkSafe Australia’s Model Code of Practice – [view here](#).
- For all other information, consult the Dangerous Goods Storage and Handling Regulations for your State or Territory – [click here](#).
